DIRECTION

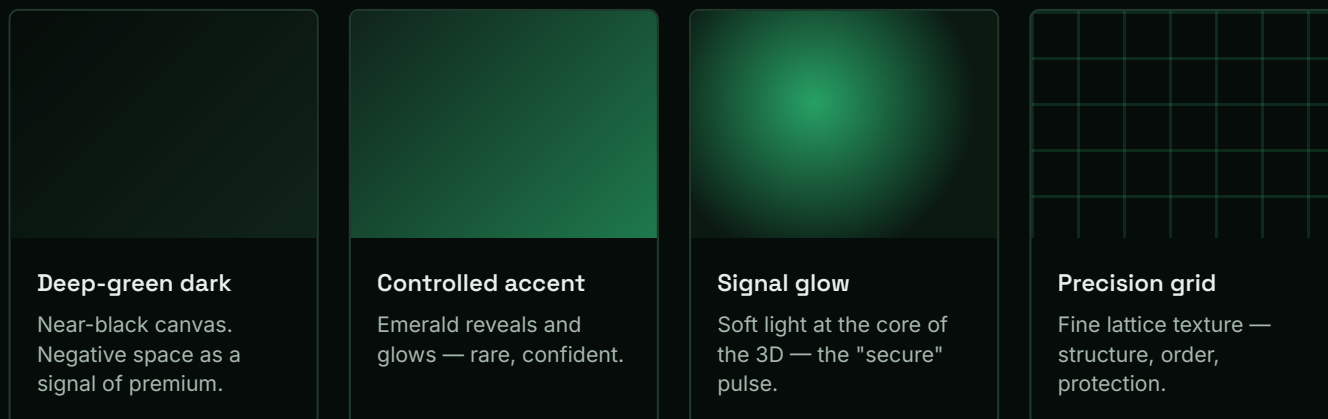

Deep-green · precise · calm

VERSION

v1 · Draft

The look, in one page

Dark, spacious, engineered. Everything sits on deep-green near-black, with the emerald accent used sparingly so it always means something. The feeling is a security operations room crossed with a Linear product page — calm, precise, and quietly technical. Motion is controlled and inevitable, never showy. Precision is the proof of competence here.

Texture & light: subtle grain, soft depth-of-field, atmospheric fog at the edges, and a low-key signal-green glow as the single light source in the hero. **Layout:** generous margins, exact alignment, mono labels for a technical accent. **Imagery style:** abstract and architectural over literal — no padlocks, no hooded figures, no stock "cyber" clichés.

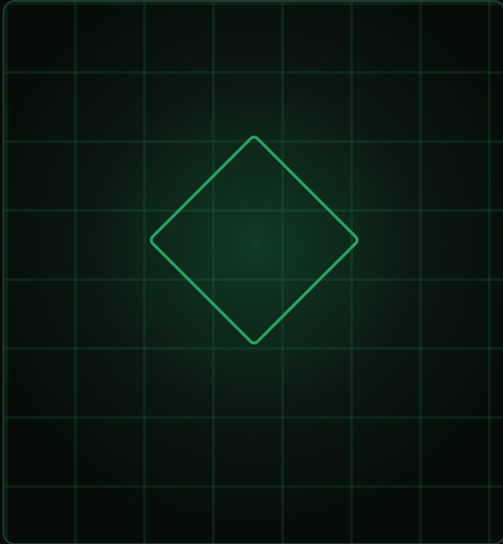

What we have, what we need, what we make

Real assets always come first. Here's the honest state of the asset pool and how each gap gets filled — real, sourced stock, or AI-generated on-brand (Higgsfield).

ASSET	STATUS	PLAN
Logo	Have	Supplied by Sefat. Used in nav + footer. [need the source file — SVG/PNG]
Professional photo	Have	Anchors the About hero; possible small use on Home. [need the file; ideally high-res]
Brand color	Have	Replaced with the deep-green system from the Brand Guide.
CV / Resume	Have	Download on About + Contact. [need the file]
Elementor build — screenshots/URL	Need	The only visible build proof. Live URL or screenshots. Top priority.
Shopify store — screenshots/URL	Need	Same — visible proof for the store case study.
Client logos (trust strip)	Need	Real logos when available; line-of-text stand-in until then.
Testimonial sources	Need	Upwork/Fiverr reviews or client quotes. Demo placeholders live now.
Hero 3D scene	Make	Built live in React Three Fiber (see next page). AI poster for mobile fallback.
Security case-study visuals	Make	Abstract on-brand imagery (invisible services can't be photographed).
Blog featured images	Make	On-brand abstract templates, AI-generated per post.
OG / social share images	Make	Branded template, auto-applied per page.

The hero: "The Secure Lattice"

One signature 3D scene, built in React Three Fiber — not a decoration, a statement. It has to say "structure, protection, precision" without a single cliché.

THE CONCEPT

An architectural lattice in deep space, protecting a glowing core.

A slow, precise wireframe structure — a faceted geometric form suggesting a vault or protective architecture — floats in deep-green darkness. At its center, a soft signal-green glow: the thing being protected. Depth-of-field blurs the far edges; atmospheric fog dissolves the boundaries. It rotates almost imperceptibly, and responds to scroll and cursor with restraint.

It reads as **built, secured, and precise** in one image — the whole positioning, before a word is read.

Linear — gradient depth

Stripe — precise mesh

Vault / architectural geometry

No padlocks · no hackers

Build notes: R3F + drei for the geometry and camera; postprocessing for depth-of-field, bloom on the core, film grain, and fog. The lattice is low-poly and Draco-compressed for performance. A static AI-rendered poster frame stands in on mobile and for prefers-reduced-motion, so the cinematic feel survives without the runtime cost.

Secondary hero option: 3D-extruded headline typography ("built to be trusted") catching the same core light — usable instead of, or alongside, the lattice. Decided in build.

The scroll, beat by beat

The homepage plays like a short, controlled film under Lenis smooth scroll. Every beat is scroll-linked — the user always owns the pace — with short pinned moments (2–3s) as accents, never traps.

01

Hero — the lattice settles

Page loads into deep dark; the lattice fades up through fog, depth-of-field pulls focus to the glowing core, headline reveals line by line.

R3F scene · DOF rack-focus · staggered type reveal

02

Into the structure

As you scroll, the camera drifts subtly through the lattice; it transitions into the Build · Secure · Grow section, the three pillars assembling into place.

scroll-linked camera · GSAP ScrollTrigger assembly

03

Work reveals

Case-study cards rise with staggered depth and a faint scan-line pass — a quiet nod to a security sweep, never gimmicky.

Framer Motion stagger · subtle parallax

04

The belief — stillness

Motion deliberately calms. Type-forward, centered, almost no movement. The pause gives the statement weight.

minimal motion · intentional negative space

05

The audit — the one bright moment

The signal-green accent activates for the lead magnet: a soft pulse of light, the single most saturated moment on the page. It signals "act here."

bloom accent · CTA emphasis

06

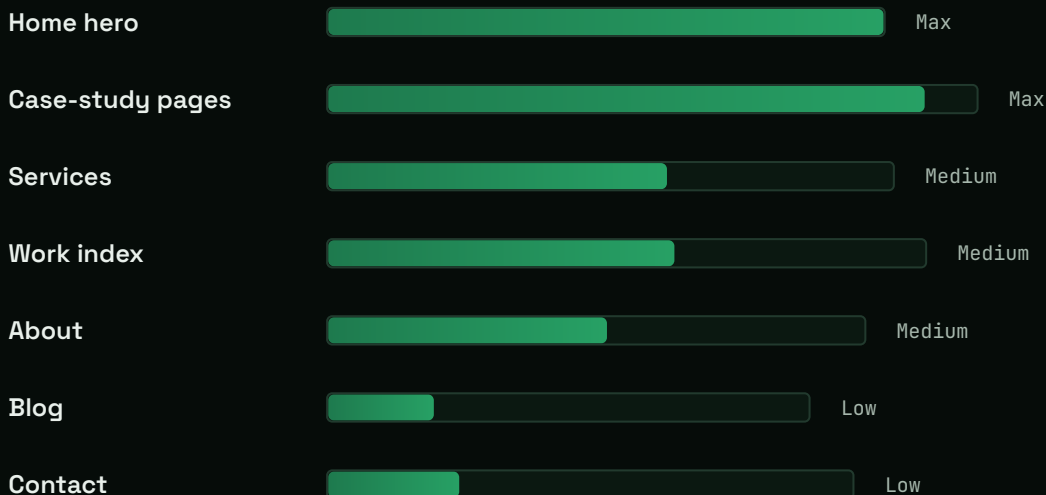

Footer — settle to dark

Everything eases back into deep obsidian. The film closes calmly, footer credit resting in the quiet.

ease-out · fog close

Where the 3D goes — and where it doesn't

Medium intensity means disciplined allocation. The hero and case-study pages carry the cinematic weight; content-heavy pages stay fast and calm so reading and SEO always win.

THE MOTION DOES

- + Reveal and settle — eased, purposeful, inevitable.
- + Follow scroll; the user always controls pace.
- + Reserve the bright accent for one moment per view.
- + Degrade gracefully to an elegant static version.

THE MOTION DOESN'T

- No particle storms or motion for its own sake.
- No hard scroll-hijack that traps the visitor.
- No 3D that blocks first paint or reading.
- No clutter — busyness would undercut the trust.

Guardrails (enforced in build): lazy-loaded, Draco-compressed 3D; 60fps desktop target; all real content in the DOM for SEO and screen readers; prefers-reduced-motion serves a static-cinematic version; mobile gets a lighter scene or the poster fallback. A slow portfolio doesn't get its owner hired — performance is part of the pitch.

Ready-to-run prompts for the gaps

For the "Make" assets, here are on-brand generation prompts (Higgsfield / image gen). These stay abstract and premium — filling gaps, never faking client work. I'll run these on your go, so we don't spend credits before you approve the direction.

Hero poster / mobile fallback

STATIC STAND-IN FOR THE R3F SCENE

Abstract 3D wireframe lattice structure, faceted geometric vault form floating in deep dark green near-black space, soft emerald-green glowing core at center, atmospheric fog, cinematic depth of field, subtle film grain, premium minimal, Linear-style, dark mode, no text, high detail — deep greens #060C09 #10241A #1E7A4E, single green light source.

Security case study — malware recovery

CASE STUDY 01 HERO VISUAL

Abstract representation of a digital system being restored and secured, dark green environment, clean glowing lines reassembling into order, calm and precise not chaotic, subtle shield-like geometry emerging, deep green palette, cinematic, minimal, no literal padlocks or hooded figures, no text.

Security case study — hardening

CASE STUDY 02 HERO VISUAL

Abstract architectural lattice forming a protective layered structure over a glowing core, deep green near-black, precise geometric grid, sense of fortification and order, atmospheric depth, premium minimal dark aesthetic, emerald accents, no clichés, no text.

Blog featured-image template

PER-POST, ON-BRAND

Minimal abstract dark green background with a single subtle geometric motif and fine grid texture, generous negative space for headline overlay, deep greens #0B1811 #1E7A4E, premium editorial, flat cinematic lighting, no text.

Note: real screenshots of the Elementor and Shopify builds are never AI-generated — those must be genuine. AI fills only abstract/atmospheric gaps.

Visual & Motion Direction · Draft v1 · Deep-green direction · Real assets prioritized; AI fills abstract gaps only, never client work · Generation runs on approval to conserve credits · Prepared under the personal brand, mohammedemmon.com
