

Every word, in his voice.

The complete site copy for sefathossain.com — calm, honest, precise. Meta title, description, and H1 for every page. This is the sign-off document before build.

PREPARED FOR	VOICE	PAGES	STATUS
Sefat Hossain	Calm · honest · no hype	Home · Services · Work · About · Blog · Contact · Audit	Draft v1 · sign-off

This is the copy — sign it off, and we build to it.

Every page below is written in Sefat's voice: the calm, honest, understated tone from the brand guide. Each starts with its **SEO spec** — the meta title, meta description, and H1 that Google and visitors see first — then the section-by-section copy laid out in reading order.

Same rule as always: wherever a real number, client name, URL, or result belongs and isn't confirmed yet, it's an **orange placeholder**. Nothing is invented as fact. Once Sefat fills these (and returns his case-study details), the copy is final and we move to build.

How to give feedback: mark any line that doesn't sound like him, or overstates. In this field, understating and being corrected upward is always safer than the reverse. Read it out loud — if it sounds like a confident, calm expert rather than a salesperson, it's right.

Home

The conversion hub — proof-forward, every section earns the next scroll toward the audit CTA.

META TITLE	Sefat Hossain — Secure, High-Performance Websites WordPress Security & Development
META DESC	I build and protect high-performance WordPress, Elementor, and Shopify websites — secure from day one and looked after long after launch. Get a free security audit.
H1	Websites, built to be trusted.

01 • HERO

Websites, built to be trusted.

I build high-performance websites and protect them from day one — then keep them secure, fast, and growing long after launch. The developer you keep, not the one who disappears.

View my work

02 • TRUST STRIP

Trusted by business owners, agencies, startups, and e-commerce stores who treat their website as more than a brochure.

Real client logos swapped in here later. Until then, this line stands on its own.

03 • BUILD • SECURE • GROW

A website isn't finished at launch. That's where the real work begins.

Build. Premium, high-performance sites in WordPress, Elementor, and Shopify — designed to convert, not just to exist.

Secure. Hardened and protected from the start. Malware removed, attacks prevented, trust kept intact.

Grow. Maintained and optimized over time, so your site becomes an asset that supports the business — not a liability that surprises you.

04 • FEATURED WORK

Real problems, quietly solved.

From hacked sites brought back online to stores rebuilt to sell — here's a look at what that work actually involves.

See all case studies

Pulls 2-3 case studies dynamically from the CMS.

Most people think launching a website is the finish line. I think it's the starting line.

A website should be secure, fast, easy to manage, and built to support real growth. Anyone can put a site online. Keeping it safe, quick, and working for your business — month after month — is the part that actually matters. That's the part I care about.

What clients say.

[Testimonial 1 — client words, real or from an Upwork/Fiverr review]

[Testimonial 2]

Dynamic from CMS. Demo placeholders now, real testimonials swapped in later.

Is your website actually secure? Most owners don't know until it's too late.

Get a free security audit. I'll check your site for the common vulnerabilities attackers look for, and send you a plain-language report on what's exposed and what to fix — no obligation, no jargon.

Services

The offer — Build / Secure / Grow, plus the care plan that drives recurring revenue. The money page.

META TITLE	Services — WordPress Security, Elementor & Shopify Development Sefat Hossain
META DESC	Website development, security hardening, malware removal, and ongoing care plans for WordPress, Elementor, and Shopify. Built secure, kept secure.
H1	Build it right. Keep it safe. Help it grow.

01 · INTRO

I work with businesses that need more than a website that just looks good on launch day. Everything I offer follows the same principle: build it properly, protect it from the start, and support it for the long run.

02 · BUILD

Website Design & Development

- Premium business websites with Elementor — custom, fast, and built to convert.
- Shopify store design and customization — stores built to sell, not just exist.
- Performance optimization — faster load times, better Core Web Vitals, better ranking.
- Responsive, mobile-first, and SEO-ready from the ground up.

03 · SECURE

Website Security

- Malware removal and hacked-site recovery — calm, thorough, and complete.
- Security hardening — closing the doors before anyone finds them.
- Firewall setup, login protection, and automated backups.
- Blacklist removal — getting your site clean and trusted again.

04 · GROW (THE CARE PLAN — RETAINER)

Ongoing Care & Maintenance

The part most freelancers skip — and the part that matters most. A monthly care plan keeps your site secure, updated, backed up, and monitored, so problems get caught before they become emergencies.

- Regular updates, security monitoring, and scheduled backups.
- Priority support when you need something changed or fixed.
- Peace of mind — someone reliable who already knows your site.

Pricing/packages: **[add tiers if you want them shown, or keep "let's talk" for custom quotes]**

Work — Index

Case studies foregrounded (the invisible security stories), projects gallery below.

META TITLE	Work & Case Studies — WordPress Security & Website Projects Sefat Hossain
META DESC	Real recovery stories and website projects — malware removal, security hardening, Elementor builds, Shopify stores, and performance work.
H1	The work, told as it actually happened.

01 · INTRO

Some of my best work is invisible — a hack cleaned up before customers noticed, an attack that never happened because the door was already closed. So instead of just showing screenshots, I'll tell you the story: what the problem was, what I did, and how it turned out.

02 · CASE STUDY GRID

Dynamic from CMS — each card shows the transformation hook. Five to start (see the Case Studies document): Malware Recovery · Security Hardening · Elementor Build · Shopify Store · Performance Optimization.

03 · PROJECTS GALLERY + CTA

Lighter visual gallery of build work below the case studies. **[Populated once live URLs / screenshots for the Elementor and Shopify projects are in]**.

Have a project in mind? Let's talk

Case Study — Template

The showpiece. This is the copy pattern; full narratives live in the Case Studies document, editable in the CMS.

META TITLE	[Case study title] — Case Study Sefat Hossain
META DESC	[One-line transformation summary — e.g. "How a hacked business website was cleaned, secured, and brought back online."]
H1	[Case study headline]

COPY PATTERN PER CASE STUDY

- **Hero:** headline + one-line tagline (the transformation).
- **The situation:** what the client was facing, in plain terms.
- **How I approached it:** the step-by-step process — this is where the trust is built.
- **The outcome:** metric cards where numbers are real, qualitative outcome where they're not. Never a fabricated figure.
- **Testimonial + next case study.**

All five full narratives are already drafted in the Case Studies PDF, in this exact voice — they drop straight in once Sefat confirms the placeholders.

About

The heaviest page on a personal site — where the person, the belief, and the trust live.

META TITLE	About Sefat Hossain — WordPress Security & Web Development Specialist
META DESC	I help businesses build, secure, and grow their websites — with a focus on WordPress security, Elementor, and Shopify. Here's how I work and what I believe.
H1	I build secure websites businesses can trust and grow with.

01 · OPENING / STORY

It started with curiosity — a fascination with how websites actually work behind the scenes. That pulled me into WordPress security and malware removal, where I spent a lot of time helping businesses recover sites that had been hacked. Seeing what that recovery meant to them — the relief, the trust restored — is what pushed me to go further: into Elementor and Shopify, so I could build complete, secure websites from the ground up, not just fix them after the fact.

02 · THE BELIEF

A website should be secure, optimized, easy to manage, and built to grow.

Most people treat launching a site as the finish line. I don't. That's the moment the real work starts — keeping it safe, fast, and useful as the business changes around it.

03 · HOW I WORK / PERSONALITY

I'm calm, detail-oriented, and honest — especially when the news isn't good. I'd rather tell you exactly what's wrong and what it'll take to fix it than sell you something you don't need. I work best with clients who value quality, transparency, and a long-term relationship over a quick job.

04 · SKILLS / STACK

- WordPress security, malware removal, and hardening
- Elementor design and development
- Shopify store design and customization
- Performance optimization and technical SEO

05 · OUTSIDE WORK

Away from the screen, I play cricket and stay endlessly curious — I spend a lot of time researching cybersecurity, new web technologies, and how businesses actually grow. The learning never really stops, and I like it that way.

I'm currently expanding my professional certifications while continuing to invest in advanced, hands-on learning. (Honest framing — states the direction without claiming a credential he doesn't yet hold.)

Blog — Index

The authority + SEO engine. Readability first; motion recedes so content leads.

META TITLE	Blog — WordPress Security, Speed & Web Tips Sefat Hossain
META DESC	Practical, plain-language articles on WordPress security, malware prevention, website speed, and getting more from your site.
H1	Practical advice for keeping your website safe and fast.

01 · INTRO

No jargon, no fear-selling — just clear, useful writing on the things business owners actually run into: hacked sites, slow pages, security worries, and how to stay ahead of them.

02 · STRUCTURE

Featured post → filterable grid by category/tag → search. Each post: full SEO (meta, Open Graph, JSON-LD Article schema, clean slug), author, date, related posts. RSS + auto sitemap. All authored and managed in the CMS.

Cadence: 4 posts/week. Starter topics Sefat could own: "What to do the moment your WordPress site is hacked," "5 signs your website has malware," "Why your site is slow (and how to fix it)."

Contact

Multiple low-friction paths: book a call, project form, download CV.

META TITLE	Contact — Let's Build Something Secure Sefat Hossain
META DESC	Have a project, a hacked site, or a website that needs care? Book a call or send a message — I reply personally.
H1	Let's talk about your website.

01 • INTRO

Whether you're launching something new, recovering from a hack, or just want your site properly looked after — tell me what's going on. I read every message myself and reply personally.

02 • FORM + OPTIONS

Fields: Name • Email • What do you need? (Build / Secure / Grow / Not sure) • Message. → submits to CMS leads table.

Book-a-call embed (Calendly or similar) + direct email and social links below the form.

Security Audit — Lead Magnet

The primary CTA destination — where most leads convert. It demonstrates the exact service he sells.

META TITLE	Free WordPress Security Audit — Find Out What's Exposed Sefat Hossain
META DESC	Get a free, no-obligation security audit of your WordPress site. I'll check for common vulnerabilities and send a plain-language report on what to fix.
H1	Find out what's exposed — before someone else does.

01 • OFFER

Most website owners have no idea how exposed their site is until something goes wrong. A free security audit changes that. I'll review your WordPress site for the common weaknesses attackers look for, and send you a clear, jargon-free report — what's at risk, and what to do about it.

02 • WHAT YOU GET

- A check for common vulnerabilities, outdated software, and weak points.
- A plain-language report you can actually understand.
- Clear next steps — whether you fix them yourself or have me handle it.
- No obligation, no pressure, no jargon.

03 • FORM + REASSURANCE

Fields: Name • Email • Website URL → submits to CMS audit_requests table → thank-you + option to book a call.

Get my free audit

Your details stay private. I use them only to run your audit and send your report — nothing else.

Website Copy • Draft v1 • Written in Sefat Hossain's voice • No metrics, client names, or results represented as fact until confirmed • Placeholders marked in orange • Prepared under the personal brand, mohammedemmon.com
